Intisam Ahmed

has successfully completed the online Professional Certificate

Microsoft AI Agents: From Foundations to Applications

The Microsoft AI Agents: From Foundations to Applications certification helps developers complete the lifecycle of AI agent creation. You'll start with Azure AI Foundry to build and deploy your first agent, then advance to programmatic development using Azure Functions, Logic Apps, and Python frameworks like Semantic Kernel and Bot Framework. The curriculum culminates in the design and deployment of a multi-agent system using AutoGen, incorporating enterprise-grade security and responsible AI principles. By completing practical projects, you'll build a professional portfolio that demonstrates your ability to transition into a specialized AI developer role.

This certificate attests to the learner's completion of an online program delivered via Coursera. It does not constitute formal enrollment at any university or entity and does not itself grant academic credit, grades, or a degree. Institutions or organizations may, at their discretion, recognize this learning toward their own programs or credentials.
